[ander-fernandez-lafuente](#)

[Portfolio](#)

Category B

SKILLS

PROGRAMMING:

C and C++
GLSL
Python
x86asm
TCP/IP protocols

ENGINES:

Unreal Engine 5
Custom 2D/3D (C++)
Unity

SOFTWARE:

OpenGL
RenderDoc
Git / Perforce
Maya / Blender
Jira / Trello
LaTeX
Visual Studio
ImGui
SDL2

PROGRAMMING SPECIALIZATIONS:

OpenGL API
Graphics pipelines
Tools and Engine
Networking
OOP

LANGUAGES:

Spanish - Native
English - Full Professional Proficiency
Basque - Native

ABOUT MYSELF

Specialized in applying mathematics, physics, and programming knowledge to multiple frameworks, specifically graphic ones. Also intersted on building tools for game engines. Portfolio at <https://anderfe47.site/>

Open to relocation within Europe or remote opportunities.

PROFESSIONAL EXPERIENCE

ZESTA PUNTA STAND GAME - EITB & DIGIPEN (JUL.2025 - ONGOING)

Game Project | 2 Programmers & 2 Artists | UE5 & C++ & Python

- Developed gameplay and menu systems, including game flow, features, and UX.
- Worked with the sensors and cameras to simulate a throw using python.

ACADEMIC PROJECTS

ADVANCED RENDERING TECHNIQUES

Solo Project | C++ | OPENGL API

- Built a 3D graphics pipeline from scratch using deferred rendering.
- Implemented support for GLTF-formatted objects via JSON parsing.
- Added features such as blurring, cascaded shadow maps, decals, ambient occlusion and bilateral filtering.

RAY CASTING FOR CONSTRUCTIVE SOLID GEOMETRY

Solo Project | C++ | CPU | Multithreaded | SFML API

- Constructed a ray tracing framework with reflections and refractions.
- Developed acceleration structures and implemented KD trees to optimize performance in complex, high-density scenes.
- Extended the framework to support Constructive Solid Geometry (CSG) operations commonly used in CAD systems.

2D RADIANCE CASCADES - GLOBAL ILLUMINATION

Solo Project | C++ | OPENGL API

- Programmed radiance cascades to simulate global illumination in a 2D graphics pipeline developed entirely from scratch.
- Added a drawable canvas and basic shapes that behave as light sources.

NUMBRA - 3D PUZZLE GAME

(SEPT.2024 - APR.2025)

3D Game Project | 5 Programmers & 7 Artists | UE5

- Created a complex camera system to enhance player navigation and capture artistic frames and screenshots. Including tools for artists.
- Implemented Menus and HUD interactions to ensure smooth transitions between menus.

EDUCATIONAL HISTORY

DIGIPEN INSTITUTE OF TECHNOLOGY EUROPE-BILBAO

(2021-2025)

Bachelor of Science in Computer Science in Real-Time Interactive Simulation

Relevant Coursework: Advanced C/C++, Advanced Real-Time Rendering Techniques (OpenGL), Game Design & Production, AI, Game Engine Architecture and Computer Networks.
